

# PICK KITCHEN CABINETS YOU CAN TRUST!

## DRAWER:

We load drawers at 15 pounds per square foot and operate them through 25,000 cycles, representing 20 years of regular use.

## DOOR:

We load a cabinet door with 65 pounds, cycle through open and close 10 times and inspect for visible signs of looseness.

## WHY?

To earn the KCMA Certified Seal, kitchen cabinets must be put through a series of 15 tests. During these tests, cabinets are checked for structural strength and finish quality. The cabinet box as well as drawers and doors are tested throughout the process.

## FINISH:

We expose the finish to vinegar; lemon, orange and grape juices; tomato ketchup; coffee; olive oil; 100-proof alcohol; mustard; and to long periods of exposure to a detergent and water solution.

## STRUCTURAL:

These tests verify the integrity and strength of the cabinets. We load wall-mounted cabinets to 600 pounds and look for structural failure.
